PROFESSIONAL SUMMARY

Senior PHP/Laravel Developer with 10+ years of experience delivering high-performance backend systems and full-stack web applications. Deep expertise in RESTful API design, microservices, event-driven architecture, queue-based async processing (Laravel Horizon + Redis), database optimization, and secure authentication (OAuth2, JWT, Laravel Sanctum). On the frontend, I build reactive, component-driven interfaces using Vue.js 3 (Composition API, Pinia, Vite), Inertia.js, Livewire, and Tailwind CSS — enabling end-to-end product ownership from data layer to user interface. Proven track record of 25–35% performance improvements and sustained 99%+ uptime in Linux/Docker production environments.

TECHNICAL SKILLS

Backend: PHP 8+ (8.1–8.4), Laravel 10/11/12, Laravel Horizon, Laravel Sanctum, Laravel Scout, Composer, PHP-FPM, Artisan CLI

Frontend: Vue.js 3 (Composition API, Pinia, Vue Router, Vite), Inertia.js, Livewire, Alpine.js, TypeScript, JavaScript ES6+, Tailwind CSS, Bootstrap, Blade, Responsive Design, SPA, PWA

API & Architecture: RESTful API Design, API Versioning, GraphQL, Webhooks, WebSockets, Event-Driven Architecture, Microservices, SOLID Principles, OOP, Clean Architecture, DDD, Repository Pattern, Observer Pattern, MVC

Authentication & Security: OAuth2, JWT, Laravel Sanctum, RBAC, Laravel Gates & Policies, OWASP Best Practices, XSS/CSRF/SQL Injection Prevention, Rate Limiting, API Security

Databases & Caching: MySQL, PostgreSQL, SQLite, Redis, Query Optimization, Indexing, Full-Text Search, Multi-Tenancy, Eloquent ORM, Raw SQL, Database Transactions, Connection Pooling

Queue & Async: Laravel Horizon, Redis Queues, Laravel Jobs, Queued Events, Notifications, Laravel Scheduler, Job Chaining, Retry Strategies, Concurrency Control

DevOps & Infrastructure: Docker, Linux (Ubuntu/CentOS), Nginx, Supervisor, SSL/TLS, Git, GitHub, GitLab, CI/CD, GitHub Actions, Deployment Automation, Performance Monitoring

Testing & Quality: PHPUnit, Pest, TDD, BDD, Feature Testing, Integration Testing, Unit Testing, API Testing, Postman, Clean Code, Code Review, Refactoring, Static Analysis

Mobile & Integrations: Flutter, Dart, Firebase, FCM Push Notifications, n8n Workflow Automation, Stripe API, Payment Gateways, SMS APIs, Google APIs, Webhook Processing

PROFESSIONAL EXPERIENCE

Senior Backend Developer / Full-Stack Solutions Engineer

CEMEX Egypt | Full-time | Oct 2017 – Present

- Engineered and sustained enterprise Laravel applications supporting business-critical workflows for 1,000+ concurrent users, combining scalable backend architecture with reliable day-to-day operational delivery.
- Architected RESTful API ecosystems processing 10K–30K requests per day and enabling dependable data exchange across Flutter applications, Firebase services, webhooks, and external platforms.
- Delivered ERP and HR capabilities with secure authentication, granular role-based access control, audit-ready workflows, and automated operational notifications.
- Re-engineered critical backend execution paths and optimized MySQL schemas and queries, improving performance by approximately 25–35% across targeted high-value workflows.
- Administered Linux-based production environments and strengthened deployment practices to support 99%+ system uptime for essential internal services.
- Converted complex stakeholder requirements into maintainable backend solutions designed for scale, security, traceability, and long-term extensibility.

Full-Stack Developer — Property Management SaaS

Freelance / Private Client | Apr 2023 – Mar 2024

- Architected a multi-tenant property management platform with landlord, tenant, and agent portals — covering lease lifecycle management, rent tracking, maintenance request workflows, and automated expiry notification pipelines (30/15/7-day reminders).
- Built the entire Vue.js 3 frontend (Composition API, Pinia, Vue Router, Vite) — including dynamic dashboards with real-time occupancy metrics, drag-and-drop unit assignment boards, and multi-step lease renewal flows with client-side form validation and server-side diff review.
- Designed a Laravel Event + Observer pipeline for lease state transitions: automated PDF contract generation, e-signature request dispatch, audit-logged status changes, and tenant onboarding email sequences — all handled via Redis-backed Laravel Horizon queues.
- Optimized complex multi-join analytical queries (occupancy rates, revenue forecasting, arrears aging) using indexed database views and Redis-cached aggregate calculations — reducing P95 query time from 3.2s to under 300ms.
- Implemented role-based document access with AWS S3 signed URLs, rate-limited upload endpoints, and Tailwind-powered responsive document manager UI — supporting PDF, DOCX, and image attachments across lease and maintenance records.

Full-Stack Developer — E-Learning Platform

Freelance / Startup Client | Jun 2022 – Jan 2023

- Designed and shipped a full-stack e-learning SaaS from scratch — course authoring, section/lesson management, HLS video streaming (Bunny.net CDN integration), a configurable quiz engine, learner progress tracking, and automated certificate generation.
- Built the learner and instructor Vue.js 3 interfaces (Composition API, Pinia) — including a real-time lesson progress tracker, an instructor drag-and-drop course builder with live preview, a time-boxed quiz state machine, and offline-capable service worker caching for lesson metadata.
- Integrated Stripe Subscriptions and one-time course payments with webhook-driven enrollment management — handling payment failures, grace periods, dunning retries, and subscription lifecycle transitions entirely through Laravel Horizon-managed job pipelines.
- Engineered a modular PHP quiz scoring engine supporting multiple question types (MCQ, fill-in-blank, ordering), weighted scoring, randomized question pools, per-attempt time limits, and per-question explanations — decoupled behind a clean Strategy pattern for future extension.
- Achieved 94% feature-test coverage (Pest) across enrollment, quiz, and payment flows using factory-seeded scenarios, database transactions for test isolation, and Stripe mock webhook payloads — enabling confident refactoring and CI/CD deployment on every push.

Mobile Developer (Flutter) — Full-Stack Integration

Exception Tech Group | Part-time / Freelance | Jan 2017 – Present

- Built production Flutter applications integrated with Laravel REST APIs for business and service-oriented use cases, owning the mobile-to-backend data flow across key user journeys.
- Delivered mobile solutions adopted by 500+ active users, translating product requirements into responsive, maintainable application experiences.
- Integrated Firebase authentication, push notifications, and backend-connected workflows to support secure access and timely user engagement.

Automation & Integration Engineer — n8n

Contract / Internal Projects | 2019 – Present

- Orchestrated n8n workflows for HR operations, notifications, reporting, and recurring business processes — reducing repetitive operational effort by approximately 40–60%.
- Connected internal and third-party systems through REST APIs and webhooks with structured data transformation, error handling, retries, and notification controls for resilient unattended execution.

Backend Developer

Ibnsina Pharma | Full-time | Nov 2015 – Dec 2016

- Developed PHP and MySQL backend services, internal APIs, database schemas, and business-logic modules supporting pharmaceutical operational applications.
- Supported feature delivery, application maintenance, production issue resolution, and performance improvements for systems used in day-to-day operations.

Backend Developer

TE Data | Full-time | Oct 2014 – Oct 2015

- Contributed PHP backend components, database operations, and service modules for internal platforms supporting telecommunications workflows.
- Diagnosed defects and delivered targeted backend enhancements that improved the reliability and maintainability of existing application capabilities.

KEY PROJECTS

WassalX — Multi-Tenant Delivery SaaS

Stack: Laravel, Vue.js 3, MySQL, Redis, Queues, Multi-Tenancy, REST API

- Designed tenant-isolated backend architecture with platform/company roles, subscription management, order routing, driver/vehicle assignment, GPS tracking, settlement wallets, and operational dashboards via RESTful APIs.
- Implemented event-driven queue pipelines for notifications, settlements, and asynchronous data processing across multiple tenant databases.

Safrne — Carpooling Platform

Stack: Laravel API, Vue.js 3, Sanctum, WebSockets (Reverb), FCM, MySQL, Nginx, Redis

- Built secure booking APIs, device-token management, push notification pipelines, Google Sign-In integration, and real-time broadcasting with Laravel Reverb.
- Configured full production stack: migrations, queue workers (Supervisor), Nginx, SSL, rate limiting, and API versioning.

Attendance & Compliance System

Stack: Laravel, Vue.js 3, MySQL, Redis Queues, XLSX Processing, Reporting API

- Developed queued XLSX import pipelines handling large employee datasets with validation, violation detection, and automated compliance reporting.
- Implemented business rules for shifts exceeding 12 hours and seven consecutive working days without rest.

Security Patrol & Inspection SaaS

Stack: Laravel, Vue.js 3, GPS API, QR Code Processing, RBAC, Multi-Tenancy

- Designed company-isolated patrol APIs with checkpoint validation, proximity checks, QR scan verification, and role-based reporting — integrated with Flutter field app.

CORE COMPETENCIES

Full-Stack Product Delivery | Scalable Backend Architecture | Vue.js 3 SPA Development | RESTful API Design | Database Optimization | Queue-Based Processing | Event-Driven Systems | SOLID & Clean Code | Authentication & Authorization | Multi-Tenancy | CI/CD & DevOps | Performance Optimization | Security Best Practices | Technical Leadership

EDUCATION

Bachelor's Degree, Faculty of Commerce | Assiut University

LANGUAGES

Arabic: Native | English: Professional Working Proficiency
